

"I have 8 Load & Go wash systems in my region, and the first one was put into service in 2007. Even on these older units, the cost for maintenance is only \$300 - \$500 per year."

**Scott Brockberg**  
**Aggregate Industries**  
**Minneapolis, MN 5541**

"The Load & GO has a lot of advantages over the conventional method of washing down after getting loaded. It is much quicker and much more consistent in terms of cleaning and water added into the mix. It is our intention to have a Load & GO at every one of our 24 plants."

**Weldon Ratliff**  
**Ratliff Ready Mix**  
**Waco, TX 76710**

"We have calculated time saving of over 12 minutes per load since we installed our Load & GO under our central mix plant. At the same time, we are getting a lot less wet loads and creating a safer work place for our drivers. Putting in a Load & GO was a great idea!"

**Buddy Jenkins**  
**Allied Concrete Co**  
**Charlottesville, VA 22902**

"The Load & Go does such a great job that I cannot believe that everyone wouldn't want one of these at their plant."

**Mike Rivecca**  
**Sonag Ready Mix**  
**Milwaukee, WI 53225**

"We put in our Load & Go in 2014 after seeing it at the World of Concrete. The biggest return we have seen is the ability to get the loaded trucks out of the yard fast. Plus Q.C. has an easier time dealing with one plant operator to keep the slump accurate without the drivers adjusting each load."

## HOW LONG DOES IT CURRENTLY TAKE YOU TO WASH DOWN YOUR MIXER AFTER LOADING?

Introducing a proven system that will increase the consistency of your mix, driver productivity, and environmental compliance.

**Load and Go**  
**READY MIXED TRUCK WASH SYSTEM**

PROFIT FROM OUR EXPERIENCE

### HISTORY

Since 1953, Shumaker Industries has provided answers to the most challenging problems faced by ready mix producers. As anyone in the concrete industry knows, one of these challenges is keeping your mixers clean. To meet the challenge, Shumaker Industries has teamed up with Key Solutions, to offer the **Load & Go ready mix truck wash system**. Key Solutions has been a leader in vocational truck cleaning systems for over 30 years; this is exactly why the **Load & Go ready mix truck wash system** is not just a good idea but a proven solution.

### HOW IT WORKS

The **Load & Go** ready mix truck wash system uses purposely-targeted high pressure water to remove concrete and cement dust from your mixer as it leaves the batch plant. The system can be located where you are currently washing down or in-line with the loading lane. Since the **Load & Go** completely cleans your mixer in less than one minute, one **Load & Go** unit can even service a dual lane plant.

### CLEAN MIXERS - #1 PRIORITY

Once our technicians get the **Load & Go** "dialed in" to address the "mess" your batch plant made on your mixers, the automated system will consistently clean your mixers better in 45 seconds than your drivers will in 5 – 10 minutes. How? 50 different nozzles are designed and directed to clean a specific part of the mixer using 1200 psi water.

### IMPROVED SAFETY

Keep your drivers in their cabs! The drivers won't have to get out of their trucks in high-traffic areas or climb ladders to wash down the charge hopper, cowling, chute or tags. The risk of injury is reduced, and the job is done faster. Drivers can load and go and be back on the road in less time.

### ENVIRONMENTAL COMPLIANCE

Reduce EPA concerns. With the **Load & Go ready mix truck wash system**, you'll be using less water – as little as 20 gallons. A driver can use more than five times that amount with a two or three inch water hose. Instead of using volume to remove the concrete, the **Load and Go system** uses extremely high pressure water, targeting the areas of the mixer that are subject to build up.
